

Features

- ▶ Biometrics, smartcard and USB key authentication
- ▶ Secured screensaver
- ▶ Random passwords
- ▶ Local or centralized administration of users and token profiles
- ▶ Secured safe mode
- ▶ Fast and easy integration (including PKI environment)
- ▶ Windows 2000, XP, Vista, Seven, 64 bits.
- ▶ AD and LDAP compliant
- ▶ ID>Pass compliant

Catch it

- ▶ End user ease of use
- ▶ High costs reduction on Help desk
- ▶ Single badge to access to buildings and network

Your information is important : protect it !

Is your IT really secured ?

Today, 50% of passwords can be cracked in a few minutes due to their low complexity.

Furthermore, use of antivirus and firewall does no longer guarantee an efficient protection against confidential information inner attack or laptop theft.

Use token to secure our workstation !

With ID>Lock, workstation access is secured by a token (smartcard or security USB key).

With ID>Lock, users must have two authenticators : a PIN code and a token such as a smartcard, an USB key or a fingerprint.

It provides security in case of theft and contributes in making the users more responsible for their information security.

Users just have to insert their token and type the PIN code : they are right away and safely connected !

Daily benefits can easily be measured : the waste of time due to password issues (omission, locked accounts, etc.) are a lot fewer.

When using ID>Lock you ensure and reinforce access control to your network.

A single security badge to access to IT and buildings

All security functions can be located into one single badge : building access, lunch, time recording and IT security.

Secure your immaterial assets

A team of highly skilled security experts is behind IDactis. 10 years of experience in protecting data and network access makes the difference.

IDactis solutions are distributed in the US and in Europe through an exclusive sales channel, including software and hardware manufacturers as well as VARs.

Our software solutions are fully compatible with the market standards in order to guarantee upgradeability. Security must not hinder productivity : this is why IDactis solutions are easy to use, deploy and maintain.

ID>Lock is available on Professional and Corporate version.

> Corporate/Advanced Edition (50 workstations or more)

Extra features regarding the Professional version

- > LDAP compliant
- > Advanced passwords management

Version dedicated to businesses requiring high level of integration and management.

> SMB Edition (Less than 50 workstations)

Version dedicated to businesses which quickly want to reinforce IT security with no impact on their infrastructure.

Language : english and french

Token : PKCS#11 compliant token (USB key and smartcard) - Fingerprint reader - USB memory key

Easy to use and to manage

When starting his workstation, user must insert his token or presents his fingerprint.

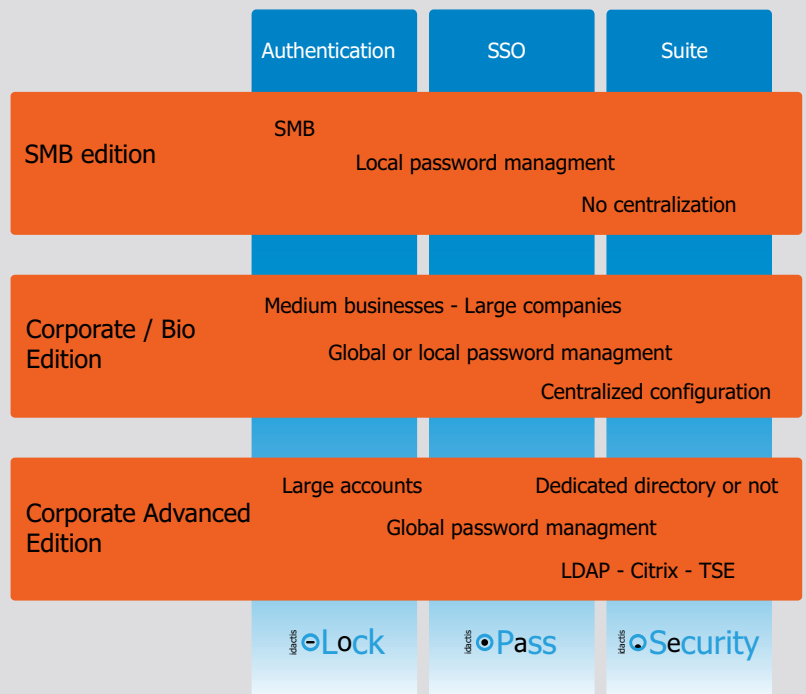

Windows login accounts are securely stored in the token. Only the PIN code allows to access to login information.

Then user must enter his PIN code. No need for entering domain name, login and password account: it is automatically provided to the Windows session box.

Windows session in progress are locked or shut down (depending on your choice) in case of token withdrawal.
